## HEAVY DUTY SCREEN

The Finlay® 883+ Spaleck mobile recycling screen is the ultimate in mobile screening and separation technology. At the heart of the screen is the two deck German designed and constructed high performance recycling waste screen with Flip-Flow-Screen Elastica.

The unique stepped top deck design combined with state of the art flip flow technology on the bottom deck catapults the 883+ Spaleck into a class of its own.

Its processing capabilities and application flexibility make the machine the only all in one mobile solution for the processing and separation of recycling materials such as incineration slag, shredder light and heavy fraction, scrap metal, electronic scrap, C&D, C&I, bulky waste, compost, plastic fractions, biomass, topsoil etc.

The model is available with hybrid technology consisting of on-board electrical motors permitting the flexibility to run the plant from an outside power supply or standard on-board engine.

### FEATURES:

- > Nearly blockage-free screening in the upper and lower deck thanks to tried and tested 3D and Flip-Flow technology.
- > The 3D screening segments guarantee correct grain size with no long pieces or extraneous material for the tension shaft screen on the lower deck.
- > The Flip-Flow screen with screwless mounted screen mats avoids unnecessary cleaning.
- > This combination of two system solutions in one machine enables you to make enormous savings on conveying equipment, steel structures and space.
